|    |                |                                                            |    |  |

#### 1 About the documentation

#### 1.1 About this document

#### **INFORMATION**

Make sure that the user has the printed documentation and ask him/her to keep it for future reference.

#### Target audience

Authorised installers

#### **INFORMATION**

This appliance is intended to be used by expert or trained users in shops, in light industry, and on farms, or for commercial and household use by lay persons.

#### **WARNING**

Make sure installation, servicing, maintenance, repair and applied materials follow the instructions from Daikin and, in addition, comply with applicable legislation and are performed by qualified persons only. In Europe and areas where IEC standards apply, EN/IEC 60335-2-40 is the applicable standard.

#### **INFORMATION**

This document only describes installation instructions specific to the outdoor unit. For installation of the indoor unit (mounting the indoor unit, connecting the refrigerant piping to the indoor unit, connecting the electrical wiring to the indoor unit ...), see the installation manual of the indoor unit.

#### **Documentation set**

This document is part of a documentation set. The complete set consists of:

- General safety precautions:
  - Safety instructions that you MUST read before installing
  - Format: Paper (in the box of the indoor unit)
- · Indoor unit installation manual:
  - Installation instructions
  - Format: Paper (in the box of the indoor unit)
- Installer reference guide:
  - Preparation of the installation, good practices, reference data,...
  - Format: Digital files on http://www.daikineurope.com/supportand-manuals/product-information/

Latest revisions of the supplied documentation may be available on the regional Daikin website or via your dealer.

The original documentation is written in English. All other languages are translations.

#### Technical engineering data

- A subset of the latest technical data is available on the regional Daikin website (publicly accessible).
- The full set of latest technical data is available on the Daikin Business Portal (authentication required).

# 2 Specific installer safety instructions

Always observe the following safety instructions and regulations.

#### 2 Specific installer safety instructions

Unit installation (see "5 Unit installation" [▶ 6])

#### **WARNING**

Installation shall be done by an installer, the choice of materials and installation shall comply with the applicable legislation. In Europe, EN378 is the applicable standard.

Installation site (see "5.1 Preparing the installation site" [▶ 6])

#### **CAUTION**

- Check if the installation location can support the unit's weight. Poor installation is hazardous. It can also cause vibrations or unusual operating noise.
- · Provide sufficient service space.
- Do NOT install the unit so that it is in contact with a ceiling or a wall, as this may cause vibrations.

Connecting the refrigerant piping (see "6.2 Connecting the refrigerant piping" [> 9])

#### **CAUTION**

- No brazing or welding on site for units with R32 refrigerant charge during shipment.
- During installation of the refrigeration system, joining of parts with at least one part charged shall be performed taking into account the following requirements: inside occupied spaces non permanent joints are not allowed for R32 refrigerant except for site made joints directly connecting the indoor unit to piping. Site made joints directly connecting piping to indoor units shall be of non permanent type.

#### **CAUTION**

- . Use the flare nut fixed to the unit.
- To prevent gas leakage, apply refrigeration oil only to the inside of the flare. Use refrigeration oil for R32.
- Do NOT reuse joints.

#### CAUTION

- Do NOT use mineral oil on flared part.
- Do NOT reuse piping from previous installations.
- NEVER install a drier to this R32 unit to guarantee its lifetime. The drying material may dissolve and damage the system.

#### WARNING

Connect the refrigerant piping securely before running the compressor. If the refrigerant piping is NOT connected and the stop valve is open when the compressor is run, air will be sucked in. This will cause abnormal pressure in the refrigeration cycle, which may result in equipment damage and even injury.

#### **CAUTION**

- Incomplete flaring may cause refrigerant gas leakage.
- Do NOT re-use flares. Use new flares to prevent refrigerant gas leakage.
- Use flare nuts that are included with the unit. Using different flare nuts may cause refrigerant gas leakage.

#### CAUTION

Do NOT open the valves before flaring is complete. This would cause refrigerant gas leakage.

#### DANGER: RISK OF EXPLOSION

Do NOT start the unit if it is vacuumed

#### Charging refrigerant (see Charging refrigerant)

#### WARNING

The refrigerant inside the unit is mildly flammable, but normally does NOT leak. If the refrigerant leaks in the room and comes in contact with fire from a burner, a heater, or a cooker, this may result in fire, or the formation of a harmful gas.

Turn off any combustible heating devices, ventilate the room, and contact the dealer where you purchased the unit

Do NOT use the unit until a service person confirms that the part from which the refrigerant leaked has been repaired.

#### **WARNING**

- Only use R32 as refrigerant. Other substances may cause explosions and accidents.
- R32 contains fluorinated greenhouse gases. Its global warming potential (GWP) value is 675. Do NOT vent these gases into the atmosphere.
- When charging refrigerant, ALWAYS use protective gloves and safety glasses.

#### **CAUTION**

To avoid compressor breakdown, do NOT charge more than the specified amount of refrigerant.

#### **WARNING**

NEVER directly touch any accidental leaking refrigerant. This could result in severe wounds caused by frostbite.

Electrical installation (see "7 Electrical installation" [▶ 10])

#### **WARNING**

Appliance shall be installed in accordance with national wiring regulations.

#### WARNING

- All wiring MUST be performed by an authorised electrician and MUST comply with the applicable legislation.
- Make electrical connections to the fixed wiring.
- All components procured on-site and all electrical construction MUST comply with the applicable legislation.

#### WARNING

- If the power supply has a missing or wrong N-phase, equipment might break down.
- Establish proper earthing. Do NOT earth the unit to a utility pipe, surge absorber, or telephone earth. Incomplete earthing may cause electrical shock.
- Install the required fuses or circuit breakers
- Secure the electrical wiring with cable ties so that the cables do NOT come in contact with sharp edges or piping, particularly on the high-pressure side.
- Do NOT use taped wires, stranded conductor wires, extension cords, or connections from a star system.
   They can cause overheating, electrical shock or fire.
- Do NOT install a phase advancing capacitor, because this unit is equipped with an inverter. A phase advancing capacitor will reduce performance and may cause accidents.

#### WARNING

ALWAYS use multicore cable for power supply cables.

#### **WARNING**

Use an all-pole disconnection type breaker with at least 3 mm between the contact point gaps that provide full disconnection under overvoltage category III.

#### **WARNING**

If the supply cord is damaged, it MUST be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

#### **WARNING**

Do NOT connect the power supply to the indoor unit. This could result in electrical shock or fire.

#### WARNING

- Do NOT use locally purchased electrical parts inside the product.
- Do NOT branch the power supply for the drain pump, etc. from the terminal block. This could result in electrical shock or fire.

#### WARNING

Keep the interconnection wiring away from copper pipes without thermal insulation as such pipes will be very hot.

#### DANGER: RISK OF ELECTROCUTION

All electrical parts (including thermistors) are powered by the power supply. Do not touch them with bare hands.

#### **DANGER: RISK OF ELECTROCUTION**

Disconnect the power supply for more than 10 minutes, and measure the voltage at the terminals of main circuit capacitors or electrical components before servicing. The voltage MUST be less than 50 V DC before you can touch electrical components. For the location of the terminals, see the wiring diagram.

Finishing indoor unit installation (see Finishing the outdoor unit installation)

#### DANGER: RISK OF ELECTROCUTION

- Make sure that the system is earthed properly.
- Turn off the power supply before servicing.
- Install the switch box cover before turning on the power supply.

Commissioning (see "10 Commissioning" [▶ 13])

#### DANGER: RISK OF ELECTROCUTION

#### DANGER: RISK OF BURNING/SCALDING

#### CAUTION

Do NOT perform the test operation while working on the indoor units.

When performing the test operation, NOT only the outdoor unit, but the connected indoor unit will operate as well. Working on an indoor unit while performing a test operation is dangerous.

#### CAUTION

Do NOT insert fingers, rods or other objects into the air inlet or outlet. Do NOT remove the fan guard. When the fan is rotating at high speed, it will cause injury.

#### 3 About the box

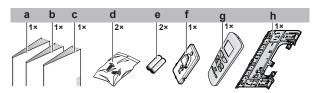

#### 3.1 Indoor unit

#### **INFORMATION**

The following figures are just examples and may NOT completely match your system layout.

## 3.1.1 To remove the accessories from the indoor unit

- a Installation manual
- **b** Operation manual
- c General safety precautions
- d Indoor unit fixing screw (M4×12L). Refer to "8.3 To fix the unit on the mounting plate" [> 12].
- e Dry battery AAA.LR03 (alkaline) for user interface
- f User interface holder
- g User interface
- h Mounting plate

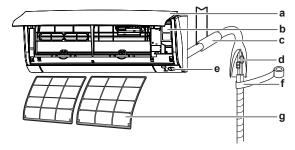

#### 4 About the unit

#### WARNING: MILDLY FLAMMABLE MATERIAL

The refrigerant inside this unit is mildly flammable.

#### 4.1 System layout

- a Front cover
- b Service cover
- c Caulk pipe hole gap with putty
- d Refrigerant piping, drain hose and interconnection cable
- e Intelligent eye sensor
- f Insulation tape
- g Air filters

#### 4.2 Operation range

Use the system in the following temperature and humidity ranges for safe and effective operation.

| Operation mode            | Operation range                                      |  |
|---------------------------|------------------------------------------------------|--|
| Cooling <sup>(a)(b)</sup> | <ul> <li>Outdoor temperature: –10~46°C DB</li> </ul> |  |
|                           | ■ Indoor temperature: 18~32°C DB                     |  |
|                           | Indoor humidity: ≤80%                                |  |
| Heating <sup>(a)</sup>    | <ul> <li>Outdoor temperature: –15~24°C DB</li> </ul> |  |
|                           | ■ Indoor temperature: 10~30°C DB                     |  |
| Drying <sup>(a)</sup>     | Outdoor temperature: -10~46°C DB                     |  |
|                           | ■ Indoor temperature: 18~32°C DB                     |  |
|                           | ■ Indoor humidity: ≤80%                              |  |

- (a) A safety device might stop the operation of the system if the unit runs outside its operation range.
- (b) Condensation and water dripping might occur if the unit runs outside its operation range.

#### 5 Unit installation

#### 5.1 Preparing the installation site

#### **WARNING**

Make sure installation, servicing, maintenance and repair comply with instructions from Daikin and with applicable legislation (for example national gas regulation) and are executed only by authorised persons.

#### **WARNING**

The appliance shall be stored so as to prevent mechanical damage and in a well-ventilated room without continuously operating ignition sources (example: open flames, an operating gas appliance or an operating electric heater).

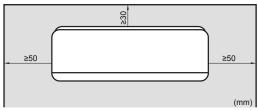

# 5.1.1 Installation site requirements of the indoor unit

#### **INFORMATION**

The sound pressure level is less than 70 dBA.

- · Air flow. Make sure nothing blocks the air flow.
- Drainage. Make sure condensation water can be evacuated properly.
- Wall insulation. When conditions in the wall exceed 30°C and a relative humidity of 80%, or when fresh air is inducted into the wall, then additional insulation is required (minimum 10 mm thickness, polyethylene foam).
- Wall strength. Check whether the wall or the floor is strong enough to support the weight of the unit. If there is a risk, reinforce the wall or the floor before installing the unit.
- Spacing. Install the unit at least 1.8 m from the floor and keep the following requirements in mind for distances from the walls and the ceiling:

# 5.1.2 Additional installation site requirements of the outdoor unit in cold climates

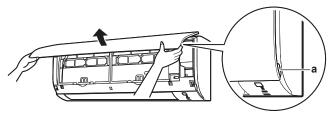

Protect the outdoor unit against direct snowfall and take care that the outdoor unit is NEVER snowed up.

In heavy snowfall areas it is very important to select an installation site where the snow will NOT affect the unit. If lateral snowfall is possible, make sure that the heat exchanger coil is NOT affected by the snow. If necessary, install a snow cover or shed and a pedestal.

#### 5.2 Opening the indoor unit

#### 5.2.1 To remove the front panel

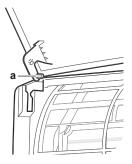

1 Hold the front panel by the panel tabs on both sides and open it.

- a Panel tabs
- 2 Remove the front panel by sliding it to the left or the right and pulling it toward you.

Result: The front panel shaft on 1 side will be disconnected.

3 Disconnect the front panel shaft on the other side in the same manner.

a Front panel shaft

#### 5.2.2 To re-install the front panel

- 1 Attach the front panel. Align the shafts with the slots and push them all the way in.
- 2 Close the front panel slowly; press at both sides and at the centre.

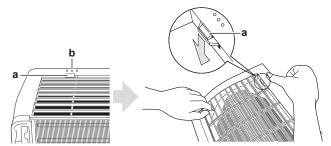

#### 5.2.3 To remove the front grille

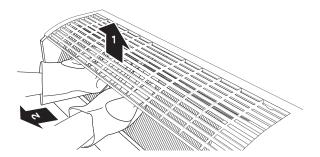

#### CAUTION

Wear adequate personal protective equipment (protective gloves, safety glasses,...) when installing, maintaining or servicing the system.

- 1 Remove the front panel to remove the air filter.
- 2 Remove 2 screws from the front grille.
- 3 Push down the 3 upper hooks marked with a symbol with 3 circles.

- a Upper hook
- **b** Symbol with 3 circles
- **4** We recommend opening the flap before removing the front grille.
- 5 Place both hands under the centre of the front grille, push it up and then toward you.

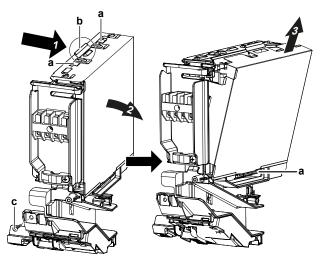

#### 5.2.4 To re-install the front grille

- 1 Install the front grille and firmly engage the 3 upper hooks.
- Install 2 screws (class 20~42) back on the front grille.
- Install the air filter and then mount the front panel.

#### 5.2.5 To remove the electrical wiring box cover

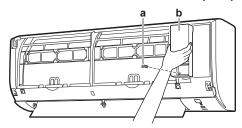

- Remove the front grille.
- 2 Remove 1 screw from the electrical wiring box.
- Open the electrical wiring box cover by pulling the protruding part on the top of the cover.
- Unhook the tab on the bottom and remove the electrical wiring box cover.

- b Protruding part on the top of the cover
- To re-install the cover, first hook the bottom tab onto the electrical wiring box, and slide the cover into the 2 upper tabs.

#### 5.2.6 To open the service cover

- Remove 1 screw from the service cover.
- Pull out the service cover horizontally away from the unit.

- Service cover screw
- Service cover

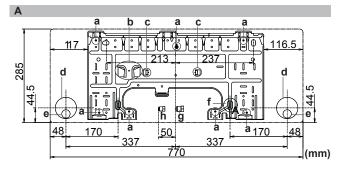

#### 5.3 Mounting the indoor unit

#### 5.3.1 To install the mounting plate

- 1 Install the mounting plate temporarily.
- Level the mounting plate.
- Mark the centres of the drilling points on the wall using a tape 3 measure. Position the end of tape measure at symbol ">".
- Finish the installation by securing the mounting plate on the wall using M4×25L screws (field supply).

#### **INFORMATION**

The removed pipe port cover can be kept in the mounting

- Mounting plate for class 20~42
- Recommended mounting plate fixing spots
- Pocket for the pipe port cover
- Tabs for placing a spirit level Through-the-wall hole Ø65 mm
- Drain hose position
- Position for the tape measure at symbol "⊳"
- Gas pipe end
- Liquid pipe end

#### 5.3.2 To drill a wall hole

#### CAUTION

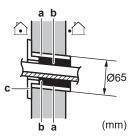

For walls containing a metal frame or a metal board, use a wall embedded pipe and wall cover in the feed-through hole to prevent possible heat, electrical shock, or fire.

#### **NOTICE**

Be sure to seal the gaps around the pipes with sealing material (field supply), in order to prevent water leakage.

- Bore a 65 mm large feed-through hole in the wall with a downward slope towards the outside.
- Insert a wall embedded pipe into the hole.
- Insert a wall cover into the wall pipe.

- Wall embedded pipe
- Putty b
- Wall hole cover
- After completing wiring, refrigerant piping and drain piping, do NOT forget to seal the gap with putty.

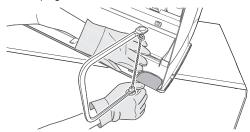

#### 5.3.3 To remove the pipe port cover

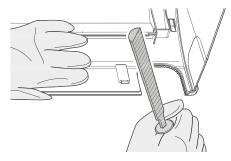

#### **INFORMATION**

To connect the piping on right-side, right-bottom, left-side or left-bottom, the pipe port cover MUST be removed.

1 Cut off the pipe port cover from inside the front grille using a coping saw.

2 Remove any burrs along the cut section using a half round needle file.

#### **NOTICE**

Do NOT use nippers to remove the pipe port cover, as this would damage the front grille.

#### 5.3.4 To provide drainage

Make sure condensation water can be evacuated properly. This involves:

- General guidelines
- · Connecting the drain piping to the indoor unit
- Checking for water leaks

#### General guidelines

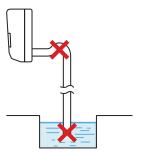

- Pipe length. Keep drain piping as short as possible.
- Pipe size. If drain hose extension or embedded drain piping is required, use appropriate parts that match the hose front end.

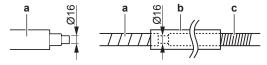

#### NOTICE

- Install the drain hose with a downward slope.
- Traps are NOT permitted.
- Do NOT put the end of the hose in water.

 Drain hose extension. To extend the drain hose, use a field supplied hose with inner Ø16 mm. Do NOT forget to use a heat insulation tube on the indoor section of the extension hose.

- a Drain hose supplied with the indoor unit
- **b** Heat insulation tube (field supply)
- c Extension drain hose
- Ridgid polyvinyl chloride pipe. When connecting a ridgid polyvinyl chloride pipe (nominal Ø13 mm) directly to the drain hose as with embedded piping work, use a field supplied drain socket (nominal Ø13 mm).

- Drain hose supplied with the indoor unit
- **b** Drain socket with nominal Ø13 mm (field supply)
- c Ridgid polyvinyl chloride pipe (field supply)
- Condensation. Take measures against condensation. Insulate the complete drain piping in the building.
- 1 Insert the drain hose in the drain pipe as shown in the following figure, so it will NOT be pulled out of the drain pipe.

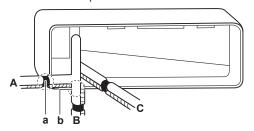

# To connect the piping on right side, right-back, or right-bottom

#### INFORMATION

The factory default is right-side piping. For left-side piping, remove the piping from the right side and install it on the left side.

- 1 Attach the drain hose with adhesive vinyl tape to the bottom of the refrigerant pipes.
- Wrap the drain hose and the refrigerant pipes together using insulation tape.

- A Right-side piping
- B Right-bottom piping
- C Right-back piping

- Remove the pipe port cover here for right side piping
- Remove the pipe port cover here for right-bottom piping

#### To connect the piping on left side, left-back, or leftbottom

#### **INFORMATION**

The factory default is right-side piping. For left-side piping, remove the piping from the right side and install it on the left side.

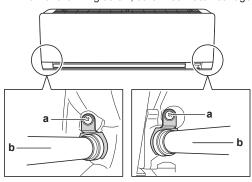

- Remove the insulation fixing screw on the right side and remove the drain hose
- Remove the drain plug on the left side and attach it to the right

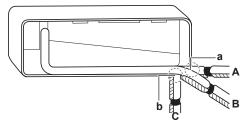

#### **NOTICE**

Do NOT apply lubricating oil (refrigerant oil) to the drain plug when inserting it. The drain plug may deteriorate and cause drain leakage from the plug.

Insert the drain hose on the left side and do not forget to tighten it with the fixing screw; otherwise water leakage may occur.

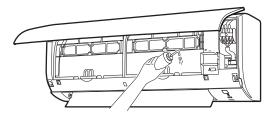

- Insulation fixing screw
- b Drain hose
- Attach the drain hose to the refrigerant piping bottom side using adhesive vinyl tape.

- Left-side piping
- Left-back piping С
- Left-bottom piping
- Remove the pipe port cover here for left-side piping
- Remove the pipe port cover here for left-bottom piping

#### To check for water leaks

- Remove the air filters.
- Gradually pour approximately 1 I of water in the drain pan, and check for water leaks.

#### 6 **Piping installation**

#### 6.1 Preparing refrigerant piping

#### 6.1.1 Refrigerant piping requirements

#### NOTICE

The piping and other pressure-containing parts shall be suitable for refrigerant. Use phosphoric acid deoxidised seamless copper for refrigerant.

Foreign materials inside pipes (including oils for fabrication) must be ≤30 mg/10 m.

#### Refrigerant piping diameter

Use the same diameters as the connections on the outdoor units:

| Class | L1 liquid piping | L1 gas piping |
|-------|------------------|---------------|
| 20~42 | Ø6.4             | Ø9.5          |

#### Refrigerant piping material

- Piping material: Phosphoric acid deoxidised seamless copper.
- Flare connections: Only use annealed material.
- · Piping temper grade and thickness:

| Outer diameter (Ø) | Temper grade | Thickness (t) <sup>(a)</sup> |     |
|--------------------|--------------|------------------------------|-----|
| 6.4 mm (1/4")      | Annealed (O) | ≥0.8 mm                      | Ø_t |

(a) Depending on the applicable legislation and the maximum working pressure of the unit (see "PS High" on the unit name plate), larger piping thickness might be required.

#### 6.1.2 Refrigerant piping insulation

- · Use polyethylene foam as insulation material:
  - with a heat transfer rate between 0.041 and 0.052 W/mK (0.035 and 0.045 kcal/mh°C)
  - with a heat resistance of at least 120°C
- Insulation thickness

| Pipe outer diameter (Ø <sub>p</sub> ) | Insulation inner<br>diameter (Ø <sub>i</sub> ) | Insulation thickness (t) |
|---------------------------------------|------------------------------------------------|--------------------------|
| 6.4 mm (1/4")                         | 8~10 mm                                        | ≥10 mm                   |

If the temperature is higher than 30°C and the humidity is higher than RH 80%, the thickness of the insulation materials should be at least 20 mm to prevent condensation on the surface of the insulation.

#### 6.2 Connecting the refrigerant piping

DANGER: RISK OF BURNING/SCALDING

#### WARNING

- Only use R32 as refrigerant. Other substances may cause explosions and accidents.
- R32 contains fluorinated greenhouse gases. Its global warming potential (GWP) value is 675. Do NOT vent these gases into the atmosphere.
- When charging refrigerant, ALWAYS use protective gloves and safety glasses.

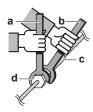

# 6.2.1 Guidelines when connecting the refrigerant piping

Take the following guidelines into account when connecting pipes:

 Coat the flare inner surface with ether oil or ester oil when connecting a flare nut. Tighten 3 or 4 turns by hand, before tightening firmly.

- ALWAYS use 2 wrenches together when loosening a flare nut.
- ALWAYS use a spanner and torque wrench together to tighten the flare nut when connecting the piping. This to prevent nut cracking and leaks.

- a Torque wrench
- **b** Spanner
- c Piping union
- I Flare nut

| Piping size<br>(mm) | Tightening<br>torque (N•m) | Flare<br>dimensions (A)<br>(mm) | Flare shape<br>(mm) |
|---------------------|----------------------------|---------------------------------|---------------------|
| Ø6.4                | 15~17                      | 8.7~9.1                         | 90°±2               |
| Ø9.5                | 33~39                      | 12.8~13.2                       | R=<br>0.4~0.8       |

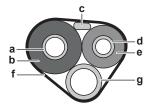

# 6.2.2 To connect the refrigerant piping to the indoor unit

#### **WARNING: MILDLY FLAMMABLE MATERIAL**

The refrigerant inside this unit is mildly flammable.

- Pipe length. Keep refrigerant piping as short as possible.
- Connect refrigerant piping to the unit using flare connections.
- Pipework shall be protected from physical damage.
- Insulate the refrigerant piping, interconnection cable and drain hose on the indoor unit as follows:

- a Gas pipe
- b Gas pipe insulation
- c Interconnection cable

- d Liquid pipe
- e Liquid pipe insulation
- f Finishing tape
- g Drain hose

#### NOTICE

Make sure to insulate all refrigerant piping. Any exposed piping might cause condensation.

#### 6.3 Checking the refrigerant piping

#### 6.3.1 To check for leaks

#### NOTICE

Do NOT exceed the unit's maximum working pressure (see "PS High" on the unit name plate).

#### **NOTICE**

ALWAYS use a recommended bubble test solution from your wholesaler.

NEVER use soap water:

- Soap water may cause cracking of components, such as flare nuts or stop valve caps.
- Soap water may contain salt, which absorbs moisture that will freeze when the piping gets cold.
- Soap water contains ammonia which may lead to corrosion of flared joints (between the brass flare nut and the copper flare).
- 1 Charge the system with nitrogen gas up to a gauge pressure of at least 200 kPa (2 bar). It is recommended to pressurize to 3000 kPa (30 bar) in order to detect small leaks.
- 2 Check for leaks by applying the bubble test solution to all connections.
- 3 Discharge all nitrogen gas.

#### 6.3.2 To perform vacuum drying

- 1 Vacuum the system until the pressure on the manifold indicates -0.1 MPa (-1 bar).
- 2 Leave as is for 4-5 minutes and check the pressure:

| If the pressure | Then                                                            |
|-----------------|-----------------------------------------------------------------|
| Does not change | There is no moisture in the system. This procedure is finished. |
| Increases       | There is moisture in the system. Go to the next step.           |

- 3 Vacuum the system for at least 2 hours to a manifold pressure of -0.1 MPa (-1 bar).
- **4** After turning the pump OFF, check the pressure for at least 1 hour.
- 5 If you do NOT reach the target vacuum or CANNOT maintain the vacuum for 1 hour, do the following:
  - · Check for leaks again.
  - Perform vacuum drying again.

#### 7 Electrical installation

#### DANGER: RISK OF ELECTROCUTION

#### **WARNING**

ALWAYS use multicore cable for power supply cables.

#### **WARNING**

If the supply cord is damaged, it MUST be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.

#### WARNING

Do NOT connect the power supply to the indoor unit. This could result in electrical shock or fire.

#### WARNING

- Do NOT use locally purchased electrical parts inside the product.
- Do NOT branch the power supply for the drain pump, etc. from the terminal block. This could result in electrical shock or fire.

#### WARNING

Keep the interconnection wiring away from copper pipes without thermal insulation as such pipes will be very hot.

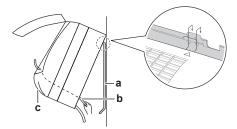

# 7.1 Specifications of standard wiring components

| Component                     |            |                                                               |
|-------------------------------|------------|---------------------------------------------------------------|
| Power supply cable            | Voltage    | 220~240 V                                                     |
|                               | Phase      | 1~                                                            |
|                               | Frequency  | 50 Hz                                                         |
|                               | Wire sizes | Must comply with applicable legislation                       |
| Interconnection cable         |            | Minimum cable section of 2.5 mm² and applicable for 220~240 V |
| Recommended field fuse        |            | 20 A                                                          |
| Earth leakage circuit breaker |            | Must comply with applicable legislation                       |

# 7.2 To connect the electrical wiring to the indoor unit

Electrical work should be carried out in accordance with the installation manual and the national electrical wiring rules or code of practice.

1 Set the indoor unit on the mounting plate hooks. Use the "△" marks as a guide.

- a Mounting plate (accessory)
- **b** Interconnection cable
- c Wire guide
- 2 Open the front panel, and then the service cover. Refer to "5.2 Opening the indoor unit" [▶ 6].
- 3 Pass the interconnection cable from the outdoor unit through the feed-through wall hole, through the back of the indoor unit and through the front side.

**Note:** In case the interconnection cable was stripped in advance, cover the ends with insulating tape.

4 Bend the end of the cable up.

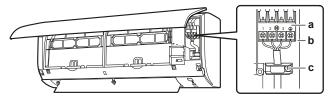

#### NOTICE

- Be sure to keep the power line and transmission line apart from each other. Transmission wiring and power supply wiring may cross, but may NOT run parallel.
- In order to avoid any electrical interference the distance between both wirings should ALWAYS be at least 50 mm.

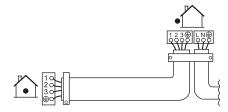

#### **WARNING**

Provide adequate measures to prevent that the unit can be used as a shelter by small animals. Small animals that make contact with electrical parts can cause malfunctions, smoke or fire.

- a Terminal block
- **b** Electrical component block
- c Cable clamp
- 5 Strip the wire ends approximately 15 mm.
- 6 Match wire colours with terminal numbers on the indoor unit terminal blocks and firmly screw the wires to the corresponding terminals
- 7 Connect the earth wire to the corresponding terminal.
- 8 Firmly fix the wires with the terminal screws.
- **9** Pull the wires to make sure that they are securely attached, then retain the wires with the wire retainer.
- **10** Shape the wires so that the service cover fits securely, then close the service cover.

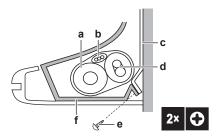

# 8 Finishing the indoor unit installation

# 8.1 To insulate the drain piping, refrigerant piping and interconnection cable

1 After the drain piping, refrigerant piping and the electrical wiring are finished. Wrap refrigerant pipes, interconnection cable and drain hose together using insulation tape. Overlap at least half the width of the tape with each turn.

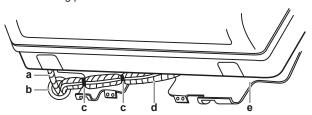

DAIKIN

- a Drain hose
- **b** Interconnection cable
- c Mounting plate (accessory)
- d Refrigerant piping
- e Indoor unit fixing screw M4×12L (accessory)
- f Bottom frame

# 8.2 To pass the pipes through the wall

1 Shape the refrigerant pipes along the pipe path marking on the mounting plate.

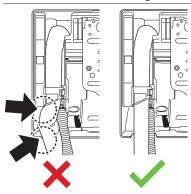

- a Drain hose
- b Caulk this hole with putty or caulking material
- c Adhesive vinyl tape
- d Insulation tape
- e Mounting plate (accessory)

#### NOTICE

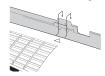

- Do NOT bend refrigerant pipes.
- Do NOT push the refrigerant pipes onto the bottom frame or the front grille.

2 Pass the drain hose and refrigerant pipes through the wall hole.

# 8.3 To fix the unit on the mounting plate

 Set the indoor unit on the mounting plate hooks. Use the "△" marks as a guide.

Press the bottom frame of the unit with both hands to set it on the bottom hooks of the mounting plate. Make sure that the wires do NOT get squeezed anywhere. **Note:** Take care that the interconnection cable does NOT get caught in the indoor unit.

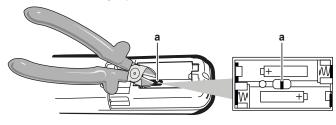

- 3 Press the bottom edge of the indoor unit with both hands until it is firmly caught by the mounting plate hooks.
- 4 Secure the indoor unit to the mounting plate using 2 indoor unit fixing screws M4×12L (accessory).

#### 9 Configuration

#### 9.1 To set a different address

In case 2 indoor units are installed in 1 room, different addresses for 2 user interfaces can be set.

- 1 Remove the batteries from the user interface.
- 2 Cut the address jumper.

a Address jumper

#### NOTICE

Be careful NOT to damage any of the surrounding parts when cutting the address jumper.

3 Turn the power supply on.

**Result:** The flap of the indoor unit will open and close to set the reference position.

#### INFORMATION

- For FTXF, ATXF, CTXF units, the following setting MUST be completed within 5 minutes after the power supply is turned on.
- In case you could NOT complete the setting in time, turn the power supply off and wait at least 1 minute before turning the power supply back on.
- 4 Press simultaneously:

| Model            | Buttons             |
|------------------|---------------------|
| FTXF, CTXF, ATXF | MODE, TEMP and TEMP |

#### 5 Press:

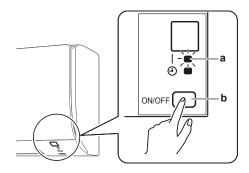

| Model            | Button |
|------------------|--------|
| FTXF, CTXF, ATXF | MODE   |

#### 6 Select:

| Model            | Symbol |
|------------------|--------|
| FTXF, CTXF, ATXF | 7-     |

#### 7 Press:

| Model            | Button      |
|------------------|-------------|
| FTXF, CTXF, ATXF | ON/OFF<br>U |

- a Operation lamp
- b Indoor unit ON/OFF switch
- 8 Press the indoor unit ON/OFF switch while the operation lamp is blinking.

| Jumper                     | Address |
|----------------------------|---------|
| Factory setting            | 1       |
| After cutting with nippers | 2       |

#### **INFORMATION**

If the setting could NOT be completed while the operation lamp was blinking, repeat the setting process from the beginning.

9 When the setting is complete, press:

| Model            | Button      |
|------------------|-------------|
| FTXF, CTXF, ATXF | ON/OFF<br>U |

Result: The user interface will return to the previous screen.

#### 10 Commissioning

#### NOTICE

ALWAYS operate the unit with thermistors and/or pressure sensors/switches. If NOT, burning of the compressor might be the result.

#### 10.1 Checklist before commissioning

After the installation of the unit, first check the items listed below. Once all checks are fulfilled, the unit must be closed. Power-up the unit after it is closed.

You read the complete installation instructions, as

| described in the installer reference guide.                                                                          |
|----------------------------------------------------------------------------------------------------------------------|
| The indoor units are properly mounted.                                                                               |
| The <b>outdoor unit</b> is properly mounted.                                                                         |
| Air inlet/outlet                                                                                                     |
| Check that the air inlet and outlet of the unit is NOT obstructed by paper sheets, cardboard, or any other material. |
| There are NO missing phases or reversed phases.                                                                      |
| The <b>refrigerant pipes</b> (gas and liquid) are thermally insulated.                                               |
| Drainage                                                                                                             |
| Make sure drainage flows smoothly.                                                                                   |
| Possible consequence: Condensate water might drip.                                                                   |
| The system is properly <b>earthed</b> and the earth terminals are tightened.                                         |

| The <b>fuses</b> or locally installed protection devices are installed according to this document, and have NOT been bypassed. |
|--------------------------------------------------------------------------------------------------------------------------------|
| The <b>power supply voltage</b> matches the voltage on the identification label of the unit.                                   |
| The specified wires are used for the <b>interconnection</b> cable.                                                             |
| The indoor unit receives the signals of the <b>user interface</b> .                                                            |
| There are NO <b>loose connections</b> or damaged electrical components in the switch box.                                      |
| The insulation resistance of the compressor is OK.                                                                             |
| There are NO damaged components or squeezed pipes on the inside of the indoor and outdoor units.                               |
| There are NO refrigerant leaks.                                                                                                |
| The correct pipe size is installed and the <b>pipes</b> are properly insulated.                                                |
| The <b>stop valves</b> (gas and liquid) on the outdoor unit are fully open.                                                    |

#### 10.2 Checklist during commissioning

The order mentioned in following commissioning checklist MUST be followed.

| The <b>minimum flow rate</b> is guaranteed in all conditions. See "To check the water volume and flow rate" in Preparing water piping. |
|----------------------------------------------------------------------------------------------------------------------------------------|
| To perform an <b>air purge</b> .                                                                                                       |
| To perform a test run when the hybrid is in heating mode.                                                                              |
| To perform an actuator test run.                                                                                                       |
| Underfloor screed dryout function                                                                                                      |
| The underfloor screed dryout function is started (if necessary).                                                                       |
| To perform a gas pressure test.                                                                                                        |
| To perform a test run on the gas boiler.                                                                                               |
| To perform a test run on the airconditioning DX unit in cooling mode.                                                                  |

#### 10.3 To perform a test run

Prerequisite: Power supply MUST be in the specified range.

Prerequisite: Test run may be performed in cooling or heating mode

**Prerequisite:** Test run should be performed in accordance with the operation manual of the indoor unit to make sure that all functions and parts are working properly.

- In cooling mode, select the lowest programmable temperature.
   In heating mode, select the highest programmable temperature.
   Test run can be disabled if necessary.
- 2 When the test run is finished, set the temperature to a normal level. In cooling mode: 26~28°C, in heating mode: 20~24°C.
- 3 The system stops operating 3 minutes after the unit is turned OFF.

#### 10.3.1 To perform a test run in winter season

When operating the air conditioner in **Cooling** mode in winter, set it to test run operation using the following method.

#### **INFORMATION**

Some of the functions CANNOT be used in the test run operation mode.

If a power failure occurs during operation, the system automatically restarts immediately after power is restored.

#### For FTXF, ATXF, CTXF units

2 Press the centre of TEMP, TEMP, and MODE simultaneously.

3 Press MODE twice.

**Result:** 7 will appear on the display. Test run operation is selected. Test run operation will stop automatically after about 30 minutes.

4 To stop operation, press ON/OFF

#### 11 Disposal

#### NOTICE

Do NOT try to dismantle the system yourself: dismantling of the system, treatment of the refrigerant, oil and other parts MUST comply with applicable legislation. Units MUST be treated at a specialised treatment facility for reuse, recycling and recovery.

#### 12 Technical data

- A subset of the latest technical data is available on the regional Daikin website (publicly accessible).
- The full set of latest technical data is available on the Daikin Business Portal (authentication required).

#### 12.1 Wiring diagram

#### 12.1.1 Unified wiring diagram legend

For applied parts and numbering, refer to the wiring diagram on the unit. Part numbering is by Arabic numbers in ascending order for each part and is represented in the overview below by "\*" in the part code.

| Symbol  | Meaning                 | Symbol     | Meaning                  |
|---------|-------------------------|------------|--------------------------|
|         | Circuit breaker         |            | Protective earth         |
| •       | Connection              |            | Protective earth (screw) |
| ∞       | Connector               | <b>(A)</b> | Rectifier                |
| Ţ       | Earth                   | -(         | Relay connector          |
|         | Field wiring            | 00         | Short-circuit connector  |
|         | Fuse                    | -0-        | Terminal                 |
| INDOOR  | Indoor unit             |            | Terminal strip           |
| OUTDOOR | Outdoor unit            | 0 •        | Wire clamp               |
|         | Residual current device |            |                          |

| Symbol | Colour | Symbol   | Colour |
|--------|--------|----------|--------|
| BLK    | Black  | ORG      | Orange |
| BLU    | Blue   | PNK      | Pink   |
| BRN    | Brown  | PRP, PPL | Purple |
